Professional Summary

Product analyst with hands-on experience building **automation pipelines**, **AI agents**, and **API integrations** at scale. Combines technical depth with product thinking — translating ambiguous, high-stakes problems into shipped solutions with measurable outcomes. Comfortable owning **0→1 work** across cross-functional, fast-moving environments.

Education

Birla Institute of Technology and Science, Pilani

Oct 2022 – July 2026

B.E. (Hons.), Electrical & Electronics Engineering

CGPA - 8.02

• **Relevant Courses** -Supply Chain Management, Business Analytics, Product and Brand Management, Generative AI, Database Management System, Machine Learning.

Experience

Darwinbox Digital Solutions

Jan 2026 – Present

Product Analyst – AI & Studio (Full-Time)

June 2026 – Present

• **Owned 0→1 development of Spotlight**, an internally-built replacement for Pendo — coordinated a small cross-functional team from problem definition through launch, delivering full feature parity and eliminating a recurring third-party vendor dependency to drive infrastructure cost reduction.

Product Analyst Intern – AI & Studio (Internship)

Jan 2026 – June 2026

• **Architected an automated ticket allocation engine** integrating **Jira APIs** with Darwinbox Automation Hub routing **150+ tickets** across module-specific queues for **15 users**, cutting assignment time by **80%** and establishing a reusable routing framework adopted across multiple workflows.

• **Built a real-time webhook ingestion pipeline** to auto-propagate verified data from third-party background verification platforms directly into **Darwinbox employee profiles**, reducing manual re-entry to **zero** across **3 integrated workflows**.

• **Deployed AI agents on Darwinbox** for knowledge management, GTM support, and internal query resolution across **8+ industries** and **15+ clients** — reclaiming hundreds of operational hours; extended the system as a **Slack-integrated Superagent** with a **Claude-powered context graph** for Studio.

Projects

FoodSwift: Fulfillment Reliability & Retention Optimization – Marketplace Product Strategy Dec 2025

• **Led root cause analysis** on declining **Orders/Month (3.2 → 2.8)** and **NPS (42 → 35)** — validated behavioral hypotheses across seasonality, fulfillment reliability, and cancellations; identified **post-confirmation cancellations** as the primary driver of silent churn.

• **Designed a reliability-first product strategy** translating insights into solution wireframes and an **executive-ready 6-slide deck**, proposing targeted interventions to restore fulfillment trust and ordering frequency.

• **Defined a metrics framework** spanning primary (Orders/Month, NPS), supporting (Cancellation Rate, Repeat Order Rate, AOV), and guardrail metrics; outlined **risk mitigation strategies** balancing customer experience, restaurant capacity, and retention.

Tripzy: Decision Intelligence Platform for Travel Planning – Decision Science Analytics

Nov 2025

• **Conceptualized a decision-first travel recommendation platform** to solve choice overload — conducted **persona-based segmentation** to identify traveler archetypes and mapped hypotheses around **decision fatigue**, **group conflict**, and **booking drop-off** as core friction points.

• **Designed a prescriptive recommendation engine** with curated choice architecture and group preference alignment — reducing cognitive load and surfacing high-confidence booking decisions faster.

• **Built hypothesis-driven experimentation frameworks** targeting **onboarding efficiency**, **engagement depth**, and **conversion** to validate and iterate on recommendation logic.

Findster – Campus Lost & Found App - Product Roadmap & Market Validation

July 2025

• **Conceptualized and prototyped** a student-focused lost & found platform with photo-based search, categories, and real-time alerts — validated through **30+ surveys** and **8 peer interviews** to identify pain points and iteratively refine core features.

• **Pitched a product roadmap** featuring map-based tracking, resale of unclaimed items, and campus onboarding — highlighting scalability and market potential.

Skills

Engineering & Integration: Python, SQL, REST APIs, Webhooks, Jira APIs, ETL Pipelines, Event-driven Workflows, No-Code/Low-Code Automation.

Data & Analytics: Pendo, PostgreSQL, PowerBI, Excel, Funnel Analysis, Metrics Frameworks, Business Analytics.

Tools & Platforms: Darwinbox Automation Hub, Figma, Agile & Scrum, PRDs & Technical Specs.

Soft Skills: Client Stakeholder Management, Problem Decomposition, Cross-functional Execution, Business Acumen.
