Professional Summary

Product-focused engineering student at BITS Pilani with experience in **product strategy, automation, and data-driven growth** across SaaS and marketplace environments. Adept at translating **ambiguous business problems into structured hypotheses, scalable solutions, and measurable outcomes** through analytics-led decision making and cross-functional execution.

Education

Birla Institute of Technology and Science, Pilani

Oct 2022 – July 2026(Expected)

B.E. (Hons.), Electrical & Electronics Engineering

- **Relevant Courses** -Supply Chain Management, Business Analytics, Product and Brand Management, Generative AI, Database Management System, Machine Learning.

Experience

Darwinbox Digital Solutions - Product Analyst Intern

Jan 2026 – Present

-Designed and productionized a **scalable ticket allocation engine** integrating **Jira REST APIs** with **Darwinbox Automation Hub**, implementing dynamic user-resolution logic (UserID ↔ Username mapping via lookup tables). Automated assignment of **150+ tickets across 15 users over 4 weeks**, eliminating manual triage and establishing a reusable, extensible routing framework.

-Built **event-driven workflow orchestration** using API triggers and conditional decision trees to optimize ticket lifecycle management, reduce operational bottlenecks, and improve **SLA compliance** through intelligent rule-based distribution.

-Developed **real-time webhook ingestion pipelines** using **Python**, handling structured JSON payload processing, API authentication, validation, and system synchronization to enable seamless third-party to internal platform data integration; enhanced **automation coverage, reliability, and cross-system interoperability**.

House Of Foods - Product Lead | Website

June 2025 – Dec 2025

- Pioneered end-to-end product strategy for a D2C food brand, defining the user journey, UI/UX, and core features to drive a successful market launch. Managed product positioning within the mass-premium segment using unit economics for pricing and a unique packaging design.

- led a **data-driven product and growth initiative** that analyzed customer trends to optimize the product portfolio, directly generating 1.2L + in revenue with a 20% customer retention rate in just 60 days.

Projects

FoodSwift: Fulfillment Reliability & Retention Optimization – Marketplace Product Strategy *Dec 2025*

-Led a structured **root cause analysis** to investigate decline in **Orders/Month (3.2 → 2.8)** and **NPS (42 → 35)**, forming and validating behavioral hypotheses around seasonality, fulfillment reliability, and restaurant-side cancellations; identified **post-confirmation cancellations** as the primary driver of silent churn.

-Designed a **reliability-first product strategy** to reduce order failures, translating insights into solution wireframes and an executive-ready 6-slide deck; proposed targeted interventions to improve fulfillment trust and restore ordering frequency.

-Defined a comprehensive **metrics framework** including primary (Orders/Month, NPS), supporting (Cancellation Rate, Repeat Order Rate, AOV), and guardrail metrics; outlined **risk mitigation strategies** balancing customer experience, restaurant capacity, and long-term retention.

Tripzy: Decision Intelligence Platform for Travel Planning – Decision Science Analytics

Nov 2025

-Conceptualized and defined a **decision-first travel recommendation platform** leveraging persona-based segmentation and **hypothesis-driven experimentation** to reduce choice overload and accelerate high-confidence booking decisions through structured, analytics-led design.

-Designed a **prescriptive recommendation engine** incorporating curated choice architecture and group preference alignment; translated behavioral insights into **scalable decision workflows** to improve onboarding efficiency, engagement depth, and conversion potential.

Findster – Campus Lost & Found App - Product Roadmap & Market Validation

July 2025

- **Conceptualized** and **prototyped** a student-focused lost & found platform with features like photo-based search, categories, and real-time alerts.

- Conducted **user research** through surveys and peer discussions to validate problem statement and refine app features.

- Pitched **product roadmap** with advanced features (map-based tracking, resale of unclaimed items, campus onboarding) to highlight **scalability** and **market potential**.

Skills

Technical Skills :- SQL, REST, Python, Excel, No-Code Product Building, PowerBI, Agile & Scrum Methodologies, Figma, Tableau, API.

Non Technical Skills :- Problem-Solving, Business Acumen, Prioritization, Strategic Thinking, Team Collaboration, Communication, User empathy, and Stakeholder Management.
