08

Business Model

Monetization strategy

THE PROBLEM

"Travel planning is slow and overwhelming — users spend excessive time researching, face decision fatigue from too many options, and struggle to align preferences in groups."

Time Overload

Users spend hours researching destinations across Tripadvisor, Reddit & YouTube with no convergence

Decision Fatigue

Hundreds of options cause analysis paralysis — users delay trips or choose poorly with regret

Group Friction

Misaligned preferences between group members cause endless back-and-forth, killing trip momentum

USER PERSONA

Arjun, 27

Marketing Manager, Bengaluru

Travels 3x/year · Budget-conscious · Time-poor

"I want to travel more but planning exhausts me before I even start."

Goals

Plan 2-6 day trips quickly
Get confident destination picks
Coordinate with friends hassle-free

Pain Points

Too many tabs & conflicting reviews
Group chats with zero decisions
Missed long weekends due to indecision

Behavior

Uses Zomato, Swiggy, Urban Company daily
Trusts curated recommendations
Expects <2 min for key decisions

Context

₹30K-80K trip budget
Tier-1 city resident
Primarily mobile-first user

PRODUCT HYPOTHESES

H1

Time
Constr
aint

HYPOTHESIS:	If we reduce effort to discover destinations → users with limited time will decide faster without overwhelm
ASSUMPTION:	<i>Time spent researching is the primary blocker to trip planning</i>
VALIDATION:	Track: Avg. session length until first destination shortlist

H2

Decisi
on
Fatigu
e

HYPOTHESIS:	If users see 3 curated options instead of many → decision fatigue reduces and confidence in selection increases
ASSUMPTION:	<i>Too many options leads to paralysis, not better decisions</i>
VALIDATION:	Track: % users who pick from 3 vs. request more options

H3

Group
Coordi
nation

HYPOTHESIS:	If users can share & align on options with their group → coordination friction reduces and final decisions are made faster
ASSUMPTION:	<i>Most delays come from misaligned preferences, not lack of options</i>
VALIDATION:	Track: Time from group link share to confirmed destination

SOLUTION OVERVIEW

A decision-first travel recommendation app

Help users choose where to go in under 2 minutes by reducing cognitive load, limiting choices, and aligning group preferences early.

Complements, not competes with Tripadvisor — solves the upstream decision problem

FEATURE 01 · Quick Trip Snapshot

5-Question Intake → 3 Picks in 30s

Eliminates endless research by capturing exactly what matters through a structured questionnaire.

💰 What's your budget range?

📅 How many days?

🌐 Vibe: Adventure / Relax / Culture / Food?

👤 Solo / Couple / Friends / Family?

📍 Preferred travel distance?

< 2 min

Target time to first shortlist

3 picks only

Strict limit reduces cognitive load

Personalized

PM Note: Limited choices increase conversion — inspired by the Paradox of Choice (Schwartz, 2004)

FEATURE 02 · Group Preference Alignment

2–3 Group-Optimised Destinations

Agreement Indicators

Visual overlay showing which destinations get thumbs-up from all members

Conflict Surfacing

Highlights mismatched preferences upfront, reducing circular group chats

Date Availability

Members mark availability; only dates that work for all are highlighted

SUCCESS METRICS & KPIs

PRODUCT ROADMAP

Phase 1

Month 1–2

MVP – Core Decision Flow

- ▶ 5-question intake form
- ▶ 3 destination recommendations
- ▶ Basic fit scoring
- ▶ Solo user flow

🎯 Validate H1: Time to Decision

Phase 2

Month 3–4

Group Planning + Confidence

- ▶ Shareable group link
- ▶ Preference merge algorithm
- ▶ Agreement / conflict indicators
- ▶ Date availability matrix

🎯 Validate H2 + H3

Phase 3

Month 5–6

Monetisation + Retention

- ▶ Booking redirect with commission
- ▶ Partner promoted listings
- ▶ Travel demand data product
- ▶ Push notifications & reactivation

🎯 Revenue + Growth Loops

BUSINESS MODEL & MONETISATION

Free-to-use with platform monetisation — aligned with user value, not against it

Primary

Affiliate Commission

Earn 4–8% commission on hotel & flight bookings redirected from Tripzy after destination selection

Est. ₹200–500 per booking

Secondary

Promoted Listings

Hotels and experience providers pay to appear in curated results when their profile matches the user's travel style

Est. ₹15K–50K per month

Future

Demand Intelligence

Anonymised, aggregated travel intent data sold to hospitality brands and tourism boards for demand forecasting

Est. ₹2L–10L per dataset

WHY TRIPZY WORKS

Solves upstream

While OTAs and blogs give information, Tripzy solves the decision problem that happens before booking. It's a new layer, not a competitor.

Psychology-backed

Limits choices to 3 (Paradox of Choice), uses preference-matching (Jobs-to-be-Done), and reduces group coordination cost (social friction theory).

Speed as feature

2-minute end-to-end flow matches the browsing pattern of mobile-first users who abandon apps with long onboarding.

Network effects

Group planning creates organic virality — every shared link is a new acquisition touchpoint with embedded social proof.
